                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The inventors claim human beta-nerve growth factor (NGF) free from other proteins of human origin. Also claimed are the DNA sequence encoding human beta-NGF operably linked with a DNA sequence capable of effecting its expression in a recombinant host cell; a replicable expression vector contg. the DNA; and host cells transformed with the vector. The plasmid claimed is plasmid ph-beta-NGF trp 1. Using the plasmid, larger amounts of pure beta-NGF are obtainable than by
                                                                                                                                                                                                                                                                                                      Key
Peptide
The inventors claim human beta-nerve growth factor (NGF) other proteins of human origin. Also claimed are the DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                           The sequence is that of a chimeric neurotrophic factor (NF) S6 which comprises the mouse neurotrophic growth factor (NGF) residues 1-50, human brain derived growth factor (NBNDF) residues 51-58 and mouse NGF residues 59-120. It may provide the activity of 2 NFs in a single mol. Co residues 59-120. It may provide the activity of 2 NFs in a single mol. Co residues 59-120. It may provide the activity of 2 NFs in a single mol. Co response discovered to a superagonist of an endogenous NF thereby enabling an confidence of the second of the second in the confidence of the second in the complex treatment of second of sector responsive to NF. The design of confidence widespread activity of parent mols. It may be used in the companion of the second of the se

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAR21873;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
comprises the mouse neurotrophic growth factor (NGF) residues 1-101, human brain derived growth factor (hBNDF) residues 103-111 and mouse NGF residues 111-120. It may provide the activity of 2 NFs in a single mol. or may serve as a superragonist of an endogenous NF thereby enabling an increased biological response at lower doses. It may also be useful in
                                                                                                               New chimeric neurotrophic factors - useful in treating nervous conditions caused by trauma, surgery, ischaemia, infection, metabolic diseases, nutritional deficiency, etc.

It may be used in the CC tumours of nervous system origin. It may also be used to treat patients CC whose nervous system origin. It may also be used to treat patients CC whose nervous system has been damaged by trauma, surgery, ischemia, CC infection (e.g. polio or AIDS), metabolic disease, nutritional CC disease, ageing, peripheral neuropathies, Parkinson's disease, Chorea or amyotrophic lateral sclerosis. S11 or antibodies Ct oit can also be used in the diagnosis and study of nervous system CC disorders. See also AAR21851-R21874 and AAQ22080-Q22131.

The invention concerns Trks and their ligands that modulate cell growth, differentiation and survival. Trk proteins are known to mediate the activities of neurotrophins and are also known proto-oncogenes. Methods are claimed for screening for small molecule NTF mimetics, such as the cyclic peptide given in AAM50844, capable of binding to a Trk protein or of modulating the binding of a neurotrophin to a Trk protein. Also claimed are medicaments comprising a small molecule NTF mimetic and their use in claimed methods for treatment of cancer or a neurodegenerative disease selected from Huntington's disease, Parkinson's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Screening for a neurotrophic factor mimetic, useful for treating, e.g., cancer and Alzheimer's, comprises combining a candidate mimetic with a fragment of a tyrosine kinase protein \,

avoid the complications of more widespread activity of parent mols. It may be used in the treatment to eliminate diseased cells, e.g. virus infected cells or tumours of nervous system origin. It may also be used to treat patients whose nervous system has been damaged by trauma, surgery, ischemia, infection (e.g. pollo or AIDS), metabolic disease, nutritional deficiency, malignancy or toxic agents. Also to treat e.g. Alzheimer's disease, ageing, peripheral neuropathies, parkinson's disease, Huntington's chorea or amyotrophic lateral sclerosis. NMI or antibodies to it can also be used in the diagnosis and study of nervous system disorders. See also AAR21851-R21874 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence is that of a chimeric neurotrophic factor (NF) NM1 which comprises the preprosequence of mouse neurotrophic growth factor (NGF) residues 1-118 of mouse NGF and a 10 amino acid antigenic peptide fragment of human myc protein. It may provide the activity of 2 NFs in a single mol. or may serve as a superagonist of an endogenous NF thereby enabling an increased biological response at lower doses. It may also be useful in targeting an active cpd. to cells responsive to NF. The design of chimeric Nfs, such as NM1, which retain specific biological activity but which are directed to a subset of factor responsive cells may enable treatment of neurological disorders but
                                                                                                                                                                                                                                                                                   AAR29493 standard; Protein; 118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 46; Fig 5; 114pp; English.

"human "mouse

BDNF

residues 69-80"

"mouse NGF residues 81-120"

/note-

NGF residues 1-68"

```
comprises the mouse neurotrophic growth factor (NF) residues 1.9,

CC human brain derived growth factor (hBNDF) residues 8.20 and mouse NGF

CC residues 23-120. It may provide the activity of 2 NFs in a single mol.

CC or may serve as a superagonist of an endogenous NF thereby enabling an

CC increased biological response at lower doses. It may also be useful in

CC chimeric NFs, such as S2, which retain specific biological activity

CC but which are directed to a subset of factor-responsive cells may

CC enable treatment of neurological disorders but avoid the complications

CC enable treatment of neurological disorders but avoid the complications

CC of more widespread activity of parent mols. It may be used in the

CC treatment to eliminate diseased cells, e.g. virus infected cells or

CC tumours of nervous system origin. It may also be used to treat patients

CC deficiency, malignancy or toxic agents, Also to treat e.g. Alzheimer's

CC disease, ageing, peripheral neuropathies, Parkinson's disease,

CC disease, ageing, schorea or amyotrophic lateral sclerosis. S2 or antibodies

CC to it can also be used in the diagnosis and study of nervous system

CC disorders. See also AAR21851-R21874 and AAQ22080-Q22131.
                                                                                                                                                                                                                                                                                                                                                        RESULT 11

It may provide the activity of 2 NFs in a single mol. CC or may serve as a superagonist of an endogenous NF thereby enabling an CC increased biological response at lower doses. It may also be useful in C targeting an active cpd. to cells responsive to NF. The design of CC chimeric Nfs, such as S8, which retain specific biological activity but which are directed to a subset of factor-responsive cells may CC enable treatment of neurological disorders but avoid the complications of more widespread activity of parent mols. It may be used in the treatment to eliminate diseased cells, e.g. virus infected cells or tumours of nervous system origin. It may also be used to treat patients whose nervous system has been damaged by trauma, surgery, ischemia, CC whose nervous system has been damaged by trauma, surgery, ischemia, CC disease, ageing, peripheral neuropathies, Parkinson's disease, ageing, peripheral neuropathies, Parkinson's disease, CC Huntington's chores or amyotrophic lateral sectorosis. S8 or antibodies to it can also be used in the diagnosis and study of nervous system or toxic disease, ageing, peripheral neuropathies, Parkinson's disease, ageing, peripheral neuropathies, pa

                                                                                                                                                                                                                                    Š
                                                                                                                                                                                                                                                                                                                                                         CC comprises the mouse neurotrophic growth factor (NGF) residues 1-33.

CC human brain derived growth factor (NBF) residues 34-42 and mouse NGF

CC residues 43-120. It may provide the activity of 2 NFs in a single mol.

CC or may serve as a superagonist of an endogenous NF. thereby enabling an

CC increased biological response at lower doses. It may also be useful in

CC targeting an active cpd. to cells responsive to NF. The design of

CC chimeric Nfs, such as S4, which retain specific biological activity

CC but which are directed to a subset of factor-responsive cells may

CC enable treatment of neurological disorders but avoid the complications

CC tumours of nervous system origin. It may also be used in the

CC tumours of nervous system origin. It may also be used to treat patients

CC whose nervous system has been damaged by trauma, surgery, ischemia,

CC infection (e.g. polio or AIDS), metabolic disease, nutritional

CC disease, ageing, peripheral neuropathles, Parkinson's disease,

CC disease, ageing, peripheral neuropathles, Parkinson's disease,

CC turnington's chorea or amyotrophic lateral sclerosis. S4 or antibodies

CC disorders. See also AAR21851-R21874 and AAQ22080-Q22131.

                                                                                                                                                                                                            CC comprises the mouse neurotrophic growth factor (NGF) residues 1-80, CC human brain derived growth factor (hNDF) residues 81-91 and mouse NGF cresidues 92-120. It may provide the activity of 2 NFS in a single mol. CC or may serve as a superagonist of an endogenous NF thereby enabling an increased biological response at lower doses. It may also be useful in CC thareful neurological response at lower doses. It may also be useful in CC thareful neurological response to NF. The design of CC chimeric Nfs, such as S9, which retain specific biological activity CC but which are directed to a subset of factor-responsive cells may CC enable treatment of neurological disorders but avoid the complications of more widespread activity of parent mols. It may be used in the CC treatment to eliminate diseased cells, e.g. virus infected cells or CC tumours of nervous system origin. It may also be used to treat patients whose nervous system has been damaged by trauma, surgery, ischemia, CC diffiction (e.g. polio or AIDS), metabolic disease, nutritional CC disease, ageing, peripheral neuropathies, Parkinson's disease. CC to it can also be used in the diagnosis and study of nervous system CC disorders. See also AAR21851-R21874 and AAQ22080-Q22131.

It may provide the activity of 2 NFs in a single mol. or may serve as a superagonist of an endogenous NF thereby enabling an increased biological response at lower doses. It may also be useful in targeting an active cpd. to cells responsive to NF. The design of chimeric NFs, such as S10, which retain specific biological activity but which are directed to a subset of factor-responsive cells may enable treatment of neurological disorders but avoid the complications
                                                                                                                                                                                                                                                                                                                                                                                        of more widespread activity of parent mols. It may be used in the treatment to eliminate diseased cells, e.g. virus infected cells or tumours of nervous system origin. It may also be used to treat patients whose nervous system has been damaged by trauma, surgery, ischemia, infection (e.g. polio or AIDS), metabolic disease, nutritional deficiency, malignancy or toxic agents. Also to treat e.g. Alzheimer's disease, ageing, peripheral neuropathies, Parkinson's disease, Huntington's chorea or amyotrophic lateral sclerosis. S10 or antibodies to it can also be used in the diagnosis and study of nervous system disorders. See also AAR21851-R21874 and AAQ22080-Q22131.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New chimeric neurotrophic factors - useful in treating nervous conditions caused by trauma, surgery, ischaemia, infection, metabolic diseases, nutritional deficiency, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Key
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          neurotrophic growth factor; Alzheimer's disease; ageing; peripheral neuropathies; Parkinson's disease; Huntington's chorea; amyotrophic lateral sclerosis; nervous system disorders.

A) Title: Isolation and nucleotide sequence of a cDNA encoding the precursor of mouse	
R;Scott, J.; Selby, M.; Urdea, M.; Quiroga, M.; Bell, G.I.; Rutter, W.J. Nature 302. 538-540. 1983	
C;Accession: A93301; A93305; A90366; I49689; I52891; A01400; I49690	
C; Species: Mus musculus (house mouse)	
nerve growth factor beta chain precursor - mouse	
RESULT 1	

```
A; Gene: NGFB
A; Introns: 21
C; Superfamily
C; Keywords: 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 J. Neurosci. Res. 20, 403-410, 1988

::
           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DB seq
